## Economic Update

The state's unemployment rate fell to 5.4 percent in March—its lowest level since July 2007. In 2015, personal income for the state grew by 6.3 percent versus 4.4 percent for the nation, due mainly to faster growth in wages.

### LABOR MARKET CONDITIONS

- California gained 4,200 nonfarm jobs in March, following a gain of 46,600 in February and a loss of 4,000 in January for a total of 46,800 for the first quarter. The average quarterly gain in 2015 was 120,750.
- Six major industry sectors added jobs in the first quarter. Construction added 4,200; trade, transportation, and utilities, 16,900; information, 4,800; educational and health services, 22,200; leisure and hospitality, 17,600; and government, 13,600 jobs.

- The nation's unemployment rate remained at 4.9 percent in February before rising to 5 percent in March due to increased labor force participation. The state's labor force participation rate increased by 0.1 percentage point to 62 percent in February and remained at that level in March. This was the first increase in California since October 2014. With California's unemployment rate at 5.4 percent, the gap between the U.S. and California unemployment rates is the narrowest since January 2007.
